Muhammad Yekini

Data & Analytics Engineer · Cloud FinOps

myekini1@gmail.com | linkedin.com/in/myekini | github.com/myekini

PROFESSIONAL SUMMARY

Data engineer with nearly 5 years building payment reconciliation and cloud-cost systems across fintech, banking and enterprise AWS. Automated reconciliation across 33+ payment providers, cutting manual work by 80%, and own the cost reporting and amortization model for a 35+ account SAP-on-AWS estate. Open to remote roles and relocation.

KEY SKILLS

Data pipelines & warehousing | Payment reconciliation | Cloud cost allocation & amortization | ETL/ELT | Dimensional modelling | Near-real-time streaming | LLM integration

PROFESSIONAL EXPERIENCE

Cloud FinOps Analyst | Freelance **Nov 2025 – Present**

Client: enterprise SAP workloads on AWS · Remote

- Own monthly cost reporting for an SAP-on-AWS estate (35+ accounts, 400+ cost lines, 4+ years of daily history): reconcile Cost Explorer exports to the Power BI model and root-cause anomalies, cutting refresh and validation time by about 60%.
- Designed daily amortization and offset logic for reservations and marketplace private offers (SUSE, MongoDB Atlas), removing lump-sum double counting from showback and catching about $135K of manual-refresh errors before they reached leadership.
- Built QuickSight dashboards of net amortized cost by SAP system ID (month-over-month movers, 12-month trend, draft forecast), and am partnering with engineering on the pipeline that will feed them from the master billing source.
- Modelled Savings Plan commitments on 1- and 3-year terms from DEV and QA database and application-server utilization, saving $100K+ a year.

Data Engineer (Consultant) | WAYA Bank **Oct 2024 – Oct 2025**

Remote

- Built an automated reconciliation system and dispute portal across 33+ payment providers (NIBSS, Interswitch, Paystack, Baxi, Quickteller, CoralPay) and bank statements, cutting manual reconciliation workload by 80% and dispute resolution time from 48 hours to under 24.
- Consolidated data from 50+ microservices into a centralized PostgreSQL (RDS) warehouse with standardized schemas, cutting cross-service query latency by 50%.
- Designed hybrid ETL/ELT: Airflow batch loads plus Kafka streaming for high-priority tables (wallets, NIP, withdrawals) at near-real-time latency (under 5 minutes), feeding Metabase dashboards and data-anomaly checks.

Data Product Manager | Earnipay **Feb 2024 – Oct 2024**

Hybrid product and data role

- Engineered an AWS data pipeline (Glue, Redshift, Lambda) for product analytics, cutting processing time by 40% and serving reporting through Frappe Insights.
- Shipped the loan feature: linked users' bank accounts through Mono, ran CRC credit-bureau checks for eligibility and calculated salary-based loan limits, processing ₦2M+ in loans during beta before rollout to 5K+ users.
- Built in-app insights on spending, income and aggregated activity, including an LSTM spend-categorization model.
- Ran A/B tests on onboarding and KYC and cohort analysis in Mixpanel, reducing drop-off by 20% and lifting retention by 15%.

AI & Automation Engineer | Mobi Automation **Mar 2022 – Nov 2023**

- Integrated LLMs (OpenAI GPT, Hugging Face) into customer support automation, handling 70% of tier-1 inquiries without an agent and cutting resolution time by 15%.
- Designed and deployed Python NLP chatbots (SVA Bot, MOBI SupportBot, Music Play, Lottery Bots) with webhooks, lifting user engagement by 60%.

Python Engineer Team Lead | Bincom Dev Center **Mar 2022 – Aug 2023**

Progression: Intern, Junior Engineer, Team Lead

- Led a team of 4 engineers and refactored the legacy Python loan-application codebase for Social Lender, a fintech lending platform, cutting application processing time by 20%.
- Automated customer onboarding data extraction with Selenium and BeautifulSoup, cutting manual entry time by 25% and errors by 30%.

EDUCATION & AWARDS

B.Tech, Mathematics & Statistics, Federal University of Technology Minna, Nigeria **2019**

KaggleX BIPOC Mentorship Program (2023, selected from 4,000+ applicants) | KaggleX Career Development Scholarship (2023) | Google Africa Developer Scholarship, Google & Andela (2021)

TECHNICAL SKILLS

Data engineering: Python, SQL, Apache Spark, Kafka, Airflow, PostgreSQL, Snowflake, ETL/ELT, data modelling (star schema), data quality

Cloud & FinOps: AWS (Glue, Redshift, Athena, Lambda, S3, RDS, ECS, Cost Explorer, Savings Plans, QuickSight), cost allocation, amortization, showback

BI & analytics: Power BI (DAX), QuickSight, Metabase, Frappe Insights, Mixpanel, Excel, A/B testing, cohort analysis

ML & LLM: scikit-learn, NLP, LLM integration (OpenAI API, Hugging Face)

DevOps & MLOps: Docker, GitHub Actions, CI/CD, MLflow, SageMaker, experiment tracking
