Muhammad Yekini

Data Scientist · Experimentation & Applied ML

myekini1@gmail.com | linkedin.com/in/myekini | github.com/myekini

PROFESSIONAL SUMMARY

Data scientist with nearly 5 years across fintech, banking and cloud analytics. Ran the onboarding and KYC experiments at Earnipay that cut drop-off by 20%, built classification and NLP models, and coached 300+ aspiring data scientists at Amdari. B.Tech in Mathematics & Statistics. Open to remote roles and relocation.

KEY SKILLS

A/B testing & experiment design | Cohort & retention analysis | Classification & NLP | Anomaly root-cause analysis | LLM integration | Data pipelines

PROFESSIONAL EXPERIENCE

Cloud FinOps Analyst | Freelance **Nov 2025 – Present**

Client: enterprise SAP workloads on AWS · Remote

- Own monthly cost reporting for an SAP-on-AWS estate (35+ accounts, 400+ cost lines, 4+ years of daily history): reconcile Cost Explorer exports to the Power BI model and root-cause anomalies, cutting refresh and validation time by about 60%.
- Designed daily amortization and offset logic for reservations and marketplace private offers (SUSE, MongoDB Atlas), removing lump-sum double counting from showback and catching about $135K of manual-refresh errors before they reached leadership.
- Built QuickSight dashboards of net amortized cost by SAP system ID (month-over-month movers, 12-month trend, draft forecast), and am partnering with engineering on the pipeline that will feed them from the master billing source.
- Modelled Savings Plan commitments on 1- and 3-year terms from DEV and QA database and application-server utilization, saving $100K+ a year, and estimated a new QA environment's cost by triangulating three methods.

Data Product Manager | Earnipay **Feb 2024 – Oct 2024**

Hybrid product and data role

- Ran A/B tests and user-journey analysis on onboarding and KYC, reducing drop-off by 20% and driving ₦10M+ in monthly incremental deposits.
- Led cohort analysis and segmentation in Mixpanel, lifting retention by 15% and generating ₦20M+ in annual recurring revenue through targeted feature changes.
- Shipped the loan feature: linked users' bank accounts through Mono, ran CRC credit-bureau checks for eligibility and calculated salary-based loan limits, processing ₦2M+ in loans during beta before rollout to 5K+ users.
- Built in-app spending, income and aggregation insights, including an LSTM spend-categorization model, on an AWS pipeline (Glue, Redshift, Lambda) that cut processing time by 40%.

Data Science Specialist | Amdari **Apr 2025 – Apr 2026**

Internship coaching programme · Remote

- Coached 300+ interns through end-to-end data science projects (preparation, modelling, evaluation, deployment) in team sessions and 1-on-1 reviews, giving feedback against data science best practices.
- Designed 50+ case studies that simulate real-world data science problems, each with a step-by-step solution and a recorded video walkthrough explaining the modelling choices.
- Ran free training and outreach sessions, built learning resources on preprocessing, algorithms and model evaluation, and tracked intern progress against defined metrics.

Data Engineer (Consultant) | WAYA Bank **Oct 2024 – Oct 2025**

Remote

- Built an automated reconciliation matching system across 33+ payment providers and bank statements, cutting manual reconciliation workload by 80% and dispute resolution time from 48 hours to under 24.
- Created Metabase data-anomaly checks that flag irregular transaction patterns and outliers for operational and financial risk monitoring.
- Delivered batch and near-real-time (under 5 minutes) pipelines on Airflow and Kafka feeding Metabase dashboards for SLA monitoring and operational alerts.

AI & Automation Engineer | Mobi Automation **Mar 2022 – Nov 2023**

- Integrated LLMs (OpenAI GPT, Hugging Face) into customer support automation, handling 70% of tier-1 inquiries without an agent and cutting resolution time by 15%.
- Designed and deployed Python NLP chatbots (SVA Bot, MOBI SupportBot, Music Play, Lottery Bots) with webhooks, lifting user engagement by 60%.

Python Engineer Team Lead | Bincom Dev Center **Mar 2022 – Aug 2023**

Progression: Intern, Junior Engineer, Team Lead

- Improved the logistic-regression credit-risk models for Social Lender, a fintech lending platform.
- Led a team of 4 engineers and refactored its legacy Python loan-application codebase, cutting application processing time by 20%.
- Automated customer onboarding data extraction with Selenium and BeautifulSoup, cutting manual entry time by 25% and errors by 30%.

EDUCATION & AWARDS

B.Tech, Mathematics & Statistics, Federal University of Technology Minna, Nigeria **2019**

KaggleX BIPOC Mentorship Program (2023, selected from 4,000+ applicants) | KaggleX Career Development Scholarship (2023) | Google Africa Developer Scholarship, Google & Andela (2021)

TECHNICAL SKILLS

Modelling: classification, regression, anomaly detection, NLP, LSTM
Statistics & experimentation: hypothesis testing, A/B testing, cohort analysis, root-cause analysis
Programming: Python (scikit-learn, TensorFlow, PyTorch, pandas, NumPy), SQL (window functions), PySpark, DAX
Data & cloud: Airflow, Kafka, Spark, Snowflake, PostgreSQL, AWS (Glue, Redshift, Athena, S3, Lambda, QuickSight)
BI: Power BI, QuickSight, Metabase, Frappe Insights, Mixpanel, Excel
LLM: LLM integration (OpenAI API, Hugging Face)
DevOps & MLOps: Docker, GitHub Actions, CI/CD, MLflow, SageMaker, experiment tracking
